

SHRIPAAD KODURI

AI Automation Engineer & Lead Systems Developer

shripaad17@gmail.com | linkedin.com/in/shripaadkoduri | shripaad-portfolio17.vercel.app | Hyderabad, Telangana, India

PROFESSIONAL SUMMARY

AI Automation Engineer with hands-on experience designing and deploying AI agents, backend automation workflows, and API-integrated business systems. Skilled in building automation solutions using n8n, Python, OpenAI, and modern web technologies to eliminate repetitive tasks, accelerate lead response times, and drive measurable business growth. Experienced in integrating CRM platforms, REST APIs, and AI-powered workflows to help service-based businesses scale operations efficiently. Passionate about translating complex business challenges into practical, scalable automation solutions.

CORE EXPERTISE

- AI Automation & Workflow Development (n8n, Make)
- Python Backend Development (Learning)
- REST APIs, Webhooks & JSON Integration
- AI Agents & LLM Workflow Design
- WhatsApp & Email Automation
- CRM & Lead Pipeline Automation
- Prompt Engineering & OpenAI Integration
- Business Process Automation
- Figma UI/UX Design
- Git & GitHub Version Control

PROFESSIONAL EXPERIENCE

AI Automation & Lead Systems Developer · Freelance / Self-Employed

December 2025 – Present · Hyderabad, India · Remote

- Design and deploy end-to-end automation systems for lead capture, qualification, and follow-up workflows across multiple client verticals.
- Build CRM pipelines with automated tagging, lead scoring, and status tracking to improve sales team efficiency.
- Integrate third-party APIs and webhooks to eliminate manual data entry and reduce task turnaround by up to 80%.
- Developed a clinic appointment automation system that captures patient requests and stores them automatically in a structured lead sheet, reducing front-desk workload significantly.
- Built automated email confirmation and follow-up sequences, ensuring zero missed customer inquiries and improving patient communication quality.
- Designed and deployed lightweight web interfaces and landing pages integrated with backend automation workflows to create seamless user journeys.
- Identify client bottlenecks and translate requirements into scalable automation solutions using modern AI platforms and no-code/low-code tools.

VALUE DELIVERED

- Helped businesses reclaim 10–15+ hours per week previously lost to manual lead handling, follow-ups, and administrative tasks.
- Reduced average customer response time from hours to minutes through intelligent automation pipelines.
- Improved lead conversion rates by ensuring consistent, timely, and personalized follow-up communication.
- Lowered operational costs by replacing repetitive human tasks with reliable, always-on automation systems.

SKILLS & TOOLS

Programming: Python (Backend Basics)

Automation: n8n, Make, Zapier

Backend: REST APIs, JSON, HTTP Requests, Webhooks, FastAPI (Learning)

AI: OpenAI API, Prompt Engineering, AI Agents, Google Gemini

Database: Supabase (Basics)

Frontend: HTML, CSS, JavaScript, Figma

Version Control: Git, GitHub

CERTIFICATIONS

- Generative AI with AWS

INDUSTRIES SERVED

Service-based businesses · Healthcare & Clinics · Real Estate · Digital Agencies · Consultancies · E-commerce · Growing SMBs
